

## ENGINEERING SOFTWARE & TOOLS

### CODESYS Runtime

612 000 60

CODESYS Control Runtime is the leading manufacturer-independent programming system according to IEC 61131-3. Programmable Logic Controllers (PLCs), ECUs / mobile controllers, visualization devices, motion controllers and additional automation devices in various industries are programmed with this automation software. The CODESYS runtime is implemented on the control platforms of Kendrion Kuhnke and can therefore be used immediately for the machine builder. Continuously improvements are being made to the programming system and enable users to continue to innovate in the future.

- Communication with the CODESYS Development System
- Supply of security functions for the protection of data and know-how
- Handling of the I/O systems and fieldbuses

| DESCRIPTION                | VALUE  |
|----------------------------|--|
| <b>Integrated function</b> | Communication with the CODESYS Development System, Loading, management and execution of the application, Debugging of the application within CODESYS |
| <b>Product status</b>      | Technology   |
| <b>Application</b>         | Compact small controllers, Standard PLC systems for production machines, Panel controllers   |
| <b>Provision</b>           | Firmware   |
| <b>Requirements</b>        | Kuhnke controller platforms  |
