

ENGINEERING SOFTWARE & TOOLS

CODESYS Automation Server

612 000 85

The CODESYS Automation Server is the industry 4.0 platform for professional automation. By means of modern web technologies, the CODESYS Automation Server supports automation engineers in typical tasks, which could only be solved in a very complex way until now. Thus the system enables the comfortable administration and remote control of PLCs and the software running on them via browser on PC, tablet and smartphone. The CODESYS Automation Server runs in a public cloud infrastructure with high availability and accessibility. The desired controllers are always connected to the CODESYS Automation Server via an Edge Gateway, which abstracts the controllers and thus clearly separates IT and OT networks. Safety is the top priority for the automation server, so that production and control data, source code and other sensitive information are always optimally protected.

- Management and remote control of PLCs
- Separation of IT and OT networks
- Secure management of production and control data

DESCRIPTION	VALUE
Integrated function	Information on topology, controller status, current project, boot application and application parameters
Product status	Technology
Application	Machinery and equipment
Provision	CODESYS Store, CODESYS Development System
Requirements	Kuhnke control platform, Edge Computer
