Press Release

INTORQ India Moves Into New Building in Pune

Aerzen, Monday, May 11, 2020

INTORQ GmbH & Co. KG, a company of the Dutch Kendron N.V. Group, moved into its new building in Pune, India a few weeks ago. The specialist for brakes and clutches for industrial applications is thus significantly expanding its capacities in Asia.

The construction of the building took exactly one year, from February 2019 to February 2020. The grand opening was scheduled to take place on March 11th – the 5th anniversary of the founding of INTORQ – but the date had to be pushed back due to the current Covid-19 curfew. A new date has yet to be announced.

However, the building was already consecrated in advance in accordance with Indian tradition. The employees were invited to this event, and the representatives of the company management in Germany participated by video conference.

As the old building required renovation and offered no room for expansion, the company decided to construct a new building at a site located only about two kilometers from the old location. Several million euros were invested in the new location, and the production capacity tripled as a result. The new headquarters of INTORQ India in Pune spans 4,700 square meters in total and has 22 employees. Additional employees will be hired over the course of the year.

The production emphasis is on brakes and clutches of the company's own standard series as well as in-house coil production. Other products related to company projects can be accommodated at the Pune production site as needed.

The merger of the INTORQ Group and Kendrion, the market leader for servo motor brakes, among other things, also gave the team in Pune some extra motivation. “We are more efficient now, and the merger opens up new opportunities,” says Simona Jadronova, Vice Director at INTORQ India. The team made every effort to assist in the construction of the new building. “Everyone appreciates the family-like atmosphere in the company and helped out diligently,” Simona Jadronova went on. For instance, the employees got together to plant trees on the new company premises and thus made a contribution to the environment.

INTORQ India not only supplies customers in India, but also in the neighboring countries of Sri Lanka, Pakistan, the United Arab Emirates, Oman, a few African countries, and even the company’s own locations in the US and Germany. With production sites in Germany, China, India, and the US, the Kendrion Group is now capable of supplying a uniform, high-quality product range worldwide.
